Experience

Tohoom LLC **September 2025 – Present**
AI Engineer (Sep 2026 – Present) | Data Analyst (Sep 2025 – Sep 2026) *Tampa, FL*

- Owned end-to-end development of AI agents in Tohoom's Salesforce CIM product using Agentforce, Einstein, Apex, Agent Script, and Data Cloud, enabling users to query business data and interpret key figures.
- Independently built 300–400 CRM Analytics dashboards with SAQL and JSON for automotive supplier customers, used by sales teams and senior executives.
- Wrote custom SAQL and SQL queries and visualizations for sales presentations; designed proposed Lightning Web Component enhancements.
- Optimized Salesforce data recipes, resolving data-quality issues to improve integrity and reporting accuracy.

GBH News (via BU Spark!) **September 2024 – December 2024**
Lead Data Analyst / NLP Engineer *Boston, MA*

- Led a student team collaborating with a GBH reporter to analyze 15,000+ debt collection cases from the MassCourts database; visualized key trends and players through an interactive Tableau dashboard and heat map.
- Architected an NLP and regex-based querying system to identify and standardize semantically similar debt collector names—improving case identification accuracy by 33% and uncovering 1,000+ new name variations.

Boston University Faculty of Computing and Data Sciences **September 2024 – December 2024**
Grader *Boston, MA*

- Evaluated student work on relational (SQL) and NoSQL (MapReduce) paradigms, partnering with course instructors to ensure accurate, consistent grading across database management, querying, and algorithm optimization.

Projects

Blockchain Anomaly Detection System | *Azure, Python* **February 2025 - May 2025**

- Designed and deployed end-to-end pipelines and real-time analytics on Azure (Synapse, Data Factory, Event Hub); implemented blockchain fraud detection using logistic regression and graph-based features, and integrated results into Power BI dashboards via Azure Function Apps and OpenAI-generated simulations.

Dairy Queen Seasonal Time Series Forecasting | *R, forecast, tseries, tidyverse, ggplot2* **April 2025 - May 2025**

- Modeled monthly U.S. Google search interest in Dairy Queen (2009–2019) as a seasonal time series in R, capturing a clear summer peak and long-term upward trend.
- Benchmarked SARIMA models (manually tuned via ACF/PACF and AICc, and auto.arima) against Holt-Winters on a 2018–2019 holdout; auto.arima forecast most accurately at 6.99% MAPE.

Skin Cancer Detection Model | *Python, PyTorch, Hugging Face, XGBoost, OpenCV* **October 2024 - December 2024**

- Developed a multimodal skin cancer detection pipeline fusing Vision Transformers (images) and XGBoost (tabular data), reaching 92.99% accuracy and 0.8907 AUROC; led fusion design and evaluation, addressing leakage and class imbalance.

Technical Skills

Languages: Python, SQL, R, SAQL, Apex, Java, C++, JavaScript
Tools & Platforms: Salesforce (Agentforce, Data Cloud, CRM Analytics), Azure, Power BI, Tableau, Git, MongoDB
Libraries: NumPy, Pandas, Scikit-Learn, PyTorch, TensorFlow, XGBoost, OpenCV, NLTK, Matplotlib, Seaborn, ggplot2

Education

Boston University **September 2024 – May 2025**
Master of Science in Data Science *Boston, MA*

University of Michigan **August 2020 – May 2024**
Bachelor of Science in Data Science, Minor in Asian Languages & Cultures *Ann Arbor, MI*

Leadership / Extracurricular

Michigan Data Science Team **January 2024 – May 2024**
Project Lead *Ann Arbor, MI*

- Directed development of a heads-up poker bot using deep reinforcement learning, designing a pseudo-siamese architecture and an adapted clipped PPO loss; taught the team core deep learning and RL concepts.

Office of New Student Programs **June 2023 – August 2023**
Orientation Leader *University of Michigan*

- Facilitated orientation sessions for incoming students and families, providing information on academic programs, campus resources, student organizations, and support services.
